

WAVE

Think outside the square

Wave doors are visually calming with their organic curved design. The solid stile and rail construction features horizontal bands of timber and glazing, each following a distinctive wave formation. Adding to the effect are radiating lines grooved into the face of the timber which follow the wave. Glazing options are Clear or Translucent.

For maximum impact, Wave is also available as a 1200mm wide door to be hung via Corinthian's Pivot Door System. The Pivot System uses pivot bearings, not conventional hinges, to handle the additional weight with ease and functionality and comes complete with everything required for installation.
